EDUCATION

Delhi Technical Campus, GGSIPU

Bachelor of Technology in Artificial Intelligence and Data Science, CGPA – 8.56

Greater Noida, India

Sep 2024 - Sep 2028

EXPERIENCE

AI Renaissance | Delhi Technical Campus

Vice President

Greater Nodia, India

September 2025 - Present

- Spearheaded the **organization of technical events and workshops**, owning end-to-end execution while aligning the team, **managing responsibilities**, and ensuring seamless coordination.
- Acted as a core leader and mentor, guiding students, driving team collaboration, resolving challenges in real time, and demonstrating strong **leadership, communication, teamwork, problem-solving, decision-making, and adaptability**.

CedurNow

Software Developer Intern

Remote

June 2025 - July 2025

- Engineered Cedur HRMS v2.0 using **React.js** for the frontend, **Node.js/Express** for backend services, and **database integration MongoDB** to enable smooth data management and product scalability.
- Implemented and deployed **full-stack features** including user authentication, API endpoints, and dynamic UI components, improving system functionality and responsiveness.

TECHNICAL SKILLS

Programming Languages(Frameworks & Libraries): Python(Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn), C/C++, JavaScript(React.js, Node.js, Express.js, MongoDB, REST APIs, Authentication) ,SQL (MySQL, SQLite)

Data Science & Analytics: Data Cleaning & Preprocessing, Exploratory Data Analysis (EDA), Feature Engineering, Data Visualization, Supervised & Unsupervised Learning (Regression, Classification, Clustering), Model Evaluation

PROJECTS

[Link](#) RetailSyncSaaS – AI-Powered Retail Forecasting Platform (*Data Science Project*)

Tech Stack: TypeScript, Python (Pandas, Scikit-learn, ML libraries) ,Analytics Dashboards, Vercel

- Built an end-to-end AI-driven **retail forecasting platform** using machine learning models for demand forecasting, category-wise sales prediction.
- Integrated predictive **ML pipelines** into a production-ready **SaaS application**, connecting backend analytics with interactive **dashboards for real-time insights** and visualization.

[Link](#) Exoplanet Prediction Model – (Machine Learning Project)

Tech Stack: Python, Pandas, NumPy, Scikit-learn, Django, REST APIs, Matplotlib, Vercel

- Developed an **end-to-end exoplanet prediction** system by training machine learning classification models and integrating them with a **Django backend** for real-time inference.
- **Built REST APIs** to connect the trained model with the **web application, handling data validation, request processing, and prediction workflows**. Deployed the application on Vercel demonstrates model-to-backend integration.

CERTIFICATIONS

[Link](#) Certified in **Google Analytics** for web analytics, audience insights, and performance measurement.

[Link](#) **Oracle Data Science Certification** in fundamentals, machine learning concepts, and data-driven problem solving.

[Link](#) **British Airways** virtual Data Science simulation focused on business analytics and customer insight generation.
